

Your Long-Term Maintenance Drug List

The following long-term maintenance drug list contains medications that you may be taking on a long-term basis for conditions such as high blood pressure or high cholesterol. These drugs will be available at your regular copayment three times at a participating retail pharmacy. After that, you must use the mail-order pharmacy or pay 100 percent of the Plan's cost for these drugs.

Only the specific drugs listed below are part of this maintenance drug provision. However, you can save money by using mail order for other long-term maintenance drugs you may currently be taking. You should continue to get all medications used on a short-term basis (such as antibiotics or drugs that require ongoing monitoring by your doctor, such as *Accutane*®) at a participating retail pharmacy.

The UAW and General Motors may make changes to this list. You will be notified of any changes as they are made. Drugs are listed alphabetically by *generic name*. The generic drugs listed below may be packaged under other brand names.

The medications listed in **bold** typeface have been added to your maintenance drug list as of February 1, 2006.
